

AEO PUNCH LIST — GFTO D2C Store

Making the store the source AI search engines quote — ChatGPT, Perplexity, Google AI Overviews, Claude. Total cost ~\$0. Two human decisions; everything else is AI-layer work inside the build phases.

Prepared by Horsepower AI · July 2026 · Companion to the Working Brief v2 — horsepower-hub.vercel.app/gfto-store/

PHASE 0 — BLOCKED ON THE NAME DECISION

- ☐ **1. Storefront name picked** → same day: domain bought, social handles claimed. *Done when: domain resolves.*
- ☐ **2. Canonical boilerplate written** — one ~50-word store description + one ~50-word Mark Rhodes bio, used identically everywhere forever. *Done when: both paragraphs locked and approved.*

PHASE 1 — CRAWLER ACCESS (BUILD WEEK 1, ~1 HOUR)

- ☐ **3. robots.txt allows AI crawlers** — GPTBot, ClaudeBot, PerplexityBot, Google-Extended, Bingbot explicitly permitted. *Done when: live file verified.*
- ☐ **4. llms.txt published** — plain-text site guide for LLM crawlers: what the store is, key pages, the testing-data page. *Done when: /llms.txt returns 200.*
- ☐ **5. Bing Webmaster Tools registered + sitemap submitted** — ChatGPT search runs on Bing's index. *Done when: sitemap shows "processed."*
- ☐ **6. Google Search Console registered + sitemap submitted.** *Done when: same.*

PHASE 2 — SCHEMA (BUILD WEEKS 2–3, TEMPLATE-LEVEL, DONE ONCE)

- ☐ **7. Product + Offer schema** on every product template (price, availability, SKU). *Done when: Google Rich Results Test passes on one product of each type.*
- ☐ **8. AggregateRating schema** wired from Judge.me reviews. *Done when: stars validate.*
- ☐ **9. FAQPage schema** on every FAQ block — product, sector, and science pages. *Done when: validates.*
- ☐ **10. Organization schema** for the store — logo, sameAs links to all socials. *Done when: validates.*
- ☐ **11. Person schema for Mark Rhodes** — formulator role, sameAs to LinkedIn + podcast appearances. The differentiator: a resolvable real chemist. *Done when: validates on the About Mark page.*

PHASE 3 — QUOTABLE CONTENT (BUILD WEEKS 3–5, PRODUCED BY THE CONTENT ENGINE)

- ☐ **12. Question-shaped headings sitewide** — "Who is [store]?" / "Does methylene blue actually work?" / "Which product is right for me?" *Done when: every sector + science + about page leads with a question.*
- ☐ **13. A 40–60 word liftable answer under every question heading** — self-contained, claims-checked, quotable verbatim. *Done when: each reads complete out of context.*

- **14. FAQ blocks: 3–5 Q&As on every product and sector page** — through the claims guardrail first. *Done when: all live pages have them.*
- **15. "Our Testing Data" page published** — the 0.31–1.22% dosing-variance data + per-batch COAs as clean, citable original data. The citation-bait asset. *Done when: live and linked from every trust bar.*
- **16. Comparison guides live** ("which one is for you," per sector) — the neutral-tone pages AI engines prefer to cite. *Done when: one per active sector.*

PHASE 4 — OFF-SITE ENTITY CONSISTENCY (LAUNCH WEEK)

- **17. Boilerplate matched everywhere** — Shopify listing, LinkedIn, Facebook, Instagram, YouTube channel, affiliate pages, podcast one-sheets. Word-for-word. *Done when: audit finds zero variants.*
- **18. Mark's podcast/guest bios use the canonical bio + link back** to About Mark. *Done when: standing one-sheet exists for every pitch.*

PHASE 5 — MEASURE & MAINTAIN (POST-LAUNCH, ONGOING)

- **19. GA4 AI-referral segment built** — chatgpt.com, perplexity.ai, copilot.microsoft.com, gemini.google.com referrers. *Done when: segment reports in the dashboard.*
- **20. AI-referral line added to the Monday summary.** *Done when: it appears weekly.*
- **21. Monthly citation check** — ask ChatGPT, Perplexity, and Google AI the five money questions ("best methylene blue supplement," "how do I know a supplement dose is accurate," etc.) and log whether/how the store appears. *Done when: first monthly log exists.*
- **22. Quarterly freshness pass** — dates, stats, and COA links current; stale pages lose AI trust fast. *Done when: calendar recurrence exists.*

The critical path runs straight through item #1. Nothing in Phases 0–2 can finish without the name. Total human decisions required: two (the name, the boilerplate) — everything else is Claude work inside the build phases.
